MATH 202B: ALGEBRAIC GEOMETRY II – SURVEY

Your name:
G-year:

*For older students:* What is your area of study and who is your adviser? *For younger students:* What areas of study (or advisers) are you considering?

What is your goal in taking this class? (Just wanting to learn algebraic geometry is an acceptable answer, but providing more specifics can be helpful.)

Describe your background in: (1) commutative algebra (2) complex algebraic geometry (have you taken Brandeis’ 250 sequence?) (3) topological manifolds (e.g. graduate topology sequence) (4) smooth manifolds (e.g. Brandeis’ 140a)

Are there any particular topics or exercises that you would like to give a short talk about? (I expect that most people will not have anything in mind – do not feel compelled to give a suggestion.)
