

Your name: D. Kleinbock

Math 28a, Quiz 7, Homomorphisms

1. Let  $\varphi : G \rightarrow \bar{G}$  be a group homomorphism, and suppose that its image has  $n$  elements, that is, the order of  $\varphi(G)$  is equal to  $n$ . Prove that  $a^n \in \text{Ker } \varphi$  for every  $a \in G$ .

$$|\varphi(G)| = n \Rightarrow (\varphi(a))^n = \bar{e} \quad \forall a \in G$$

$$\Rightarrow \varphi(a^n) = \bar{e} \quad \forall a \in G \Leftrightarrow a^n \in \text{Ker } \varphi \quad \forall a \in G$$

2. Show that there is no homomorphism from  $\mathbb{Z}_8 \oplus \mathbb{Z}_2 \oplus \mathbb{Z}_2$  onto  $\mathbb{Z}_4 \oplus \mathbb{Z}_4$ .

Let  $\varphi$  be such a homomorphism, then  $\mathbb{Z}_4 \oplus \mathbb{Z}_4 \cong (\mathbb{Z}_8 \oplus \mathbb{Z}_2 \oplus \mathbb{Z}_2) / \text{Ker } \varphi$

However the element  $(4, 0, 0)$  must be in the kernel of  $\varphi$   
(because all elements of  $\mathbb{Z}_4 \oplus \mathbb{Z}_4$  have orders 4 or less, and

$$\varphi(4, 0, 0) = \varphi(4(1, 0, 0)) = 4\varphi(1, 0, 0) = (0, 0, 0) \quad )$$

Therefore  $(\mathbb{Z}_8 \oplus \mathbb{Z}_2 \oplus \mathbb{Z}_2) / \text{Ker } \varphi \cong \mathbb{Z}_4 \oplus \mathbb{Z}_2 \oplus \mathbb{Z}_2$ ,

which is not isomorphic to  $\mathbb{Z}_4 \oplus \mathbb{Z}_4$

(by counting elements of order 2 or 4)
